

Dashboard

Your daily operations snapshot, in one screen

Purpose

The Dashboard is the first screen after signing in. It condenses every module into a set of live numbers plus automated alerts, so you can see what needs attention without opening each module.

Key functions

- Live KPI cards — active projects, open incidents, overdue actions, active permits, open snags, attendance today, expiring documents, pending approvals, open NCRs, estimates sent.
- Red / amber cards draw attention to problems (e.g. overdue actions).
- Smart Nudges list with severity, kind and one-click *Review* links.
- Shortcut to the AI Assistant from the page header.

How to use it

1. Review the KPI row to spot anything red or rising.
2. Scan **Smart Nudges** and click *Review* to jump straight to the record.
3. Use the sidebar to open a module for detail.

Tip: KPI cards are click-free by design — numbers always refresh from live data, including alerts generated when actions go overdue.
