

Projects

The register that scopes your site records

Purpose

Projects form the backbone of the platform. Incidents, snags, inspections, permits, estimates and attendance are all linked to a project, so history stays organized per site or job.

Key functions

- Create and edit projects (name, details, active status).
- Project list with status at a glance.
- Project detail page showing core record.
- Every related record references the project for reporting.

How to use it

1. Open **Projects** in the sidebar.
2. Click **Create**, enter the project name and details, and save.
3. Select the project when creating incidents, permits, estimates, etc.

Tip: keep project names consistent with site names / contract numbers so records stay easy to find and report on.
