

Safety & EHS

Incidents, corrective actions and toolbox talks

Purpose

Capture safety events the moment they happen, drive corrective actions to completion, and demonstrate a proactive safety culture with recorded toolbox talks.

Key functions

- Report **incidents & near-misses** with category and severity.
- **Corrective actions** — each incident can carry multiple actions with an owner and due date; overdue items alert on the dashboard.
- Role-based notifications to Safety Officer / Site Manager.
- Status lifecycle moves a report from open through action to closure.
- **Toolbox talks** — record topic, date and facilitator; keep a history for audits.

How to use it

1. Open **Incidents & Near-Misses**, click **Report** and fill in the details.
2. Add **corrective actions** with assignee and due date.
3. Transition status as work progresses; close once verified.
4. Record **toolbox talks** under their tab.

Good practice: assign a due date to every corrective action — the platform flags overdue items automatically so they are never forgotten.
