

Estimation & BOQ

Estimates, bills of quantities and proposals

Purpose

Build project estimates quickly as category-based bills of quantities, get rate suggestions, and produce a clean proposal view for clients — all in one place.

Key functions

- **Estimates** per project with status tracking (draft to sent).
- **Categories** with **BOQ line items** (description, quantity, unit, rate, amount).
- **Rate suggestions** to speed up pricing of familiar items.
- Category and item totals computed live.
- **Proposal** page — a clean, print-ready summary for the client.

How to use it

1. Open **Estimates & BOQ** and **Create** an estimate for a project.
2. Add **categories**, then **line items** under each.
3. Use **Suggest rate** where you want a starting price, then adjust.
4. Mark the estimate as sent when it goes to the client.
5. Open the **Proposal** view and print / save as PDF.

Tip: the proposal page is designed for printing — use the browser's *Print / Save as PDF* to send a clean quotation.
