

Workforce

Attendance, workers and contractors

Purpose

Track who is on site, keep a worker register with their documents, and manage the contractor list — so staffing and compliance data are always current.

Key functions

- **Attendance** — mark daily attendance per worker and record clock-outs; day view shows who is present.
- **Workers** — worker register with details and a document store.
- **Documents** — attach certifications / IDs with expiry dates; expiring documents are flagged on the dashboard.
- **Contractors** — maintain the active contractors register.
- Attendance today feeds the dashboard “Present today” KPI.

How to use it

1. Under **Workforce**, keep **Workers** current (add documents with expiry dates).
2. Each day, open **Attendance** and mark workers present / clock-out.
3. Review **Contractors** as agreements start or end.

Tip: add a valid-to date on every worker document — FieldSuite warns you on the dashboard before anything expires.
