

FieldSuite — User Guide

Safety, quality, permits, estimation and workforce operations in one place

About FieldSuite

FieldSuite is a web-based operations platform for construction SMEs. It brings safety, quality, permitting, estimation and workforce data together per project, so every team works from the same live record. Each organization has its own isolated workspace, and all activity is audit-tracked.

Signing in

1. Open your FieldSuite URL and go to the **Sign in** page.
2. Enter your **email** and **password**, then click **Sign in**.

Demo access: on the hosted demo, pick a role card on the sign-in page to auto-fill credentials (any of the five demo accounts) and enter the password **Demo123!**.

Your workspace

- **Sidebar** — navigate between modules; highlights the page you are on.
- **Notifications bell** — unread alerts (e.g. overdue actions, new approvals) with a count badge.
- **Dashboard** — a cross-module snapshot with key numbers and automated “Smart Nudges”.
- **Page title bar** — shows the active module at all times.
- **User chip (top right)** — your name, role, and *Sign out*.

Module overview

Module	What it does	Typical users
Dashboard	Live KPI snapshot + Smart Nudges and cross-module alerts.	Everyone
Projects	Project register used to scope all records.	Admin, Site Manager
Safety & EHS	Incidents / near-misses, corrective actions, toolbox talks.	Safety Officer, Site Manager
Quality	Snag / punch lists, inspections with checklists, NCRs.	QC Inspector, Site Manager
Work Permits (ePTW)	Permit lifecycle with risk-based approvals and checklist.	Site Manager, Safety Officer
Estimation	Estimates and BOQs (categories + line items) with rate suggestions and proposals.	Estimator, Admin
Workforce	Attendance, worker register and contractor register.	Site Manager, Admin
AI Assistant	Q&A over your data and one-click structured drafts.	Everyone

Working role overview

Role	Typical capabilities
Admin	Full access across every module and workspace configuration.
Site Manager	All modules; submits and approves permits, manages workforce back office.
Safety Officer	Incidents, corrective actions and toolbox talks; permit approval/suspension.
QC Inspector	Snags, inspections and NCRs; closes quality non-conformances.
Estimator	Creates and edits estimates and BOQ line items; suggests and applies rates.

Note: details can vary per site configuration — the sidebar only shows modules you can use, and guarded actions simply hide for other roles.

Working smarter

- **Smart Nudges** on the dashboard flag overdue corrective actions, expiring documents, permits awaiting approval and more — with a one-click *Review* link.
- **Notifications** keep assignees and approving roles informed without email.
- **AI Assistant** answers questions using your own data, and drafts incident/snag/NCR entries from plain text for review before saving. It works offline (rules-based) by default.
- **Times** are stored and displayed in UTC to avoid site/office time-zone confusion.
- **Print to PDF** — details and proposal pages are print-friendly (use your browser's *Print / Save as PDF*).
